```

Lab Objectives & Outcomes Learning Objectives Understand the architecture of YOLOv8 and its variants (Detect / Segment / Classify) Set up and configure a YOLOv8 pipeline on real-world data Perform object detection, instance segmentation, and image classification Evaluate model performance using standard metrics (mAP, Precision, Recall, F1) Optimize the model using techniques like fine-tuning, hyperparameter tuning, and export Explore real-world applications of multi-task YOLO models Expected Outcomes A trained / fine-tuned YOLOv8 model on a chosen dataset Evaluation report with visualizations Comparative analysis between YOLOv8 variants GitHub-published, reproducible notebook

importedthe dataset directly from kaggle to colab

```

readme_content = """# □ Object Detection using YOLOv8 (Helmet/Person Detection)

📌 Project Title

Design and Optimization of an Object Detection and Multi-Object Classification System using YOLOv8

🎯 Objective

The objective of this project is to design, implement, and optimize an object detection system using YOLOv8. The system detects and classifies objects in images using deep learning techniques.

🛠️ Tools & Technologies

- Google Colab
- Ultralytics YOLOv8
- Python
- Kaggle API

📦 Dataset

- Dataset imported directly from Kaggle using Kaggle API
- Lightweight dataset (<50MB)
- Contains annotated images for object detection (Person class)

⚙️ Methodology

1. Imported dataset using Kaggle API
2. Organized dataset into YOLO format (images + labels)
3. Created data.yaml configuration file
4. Trained YOLOv8 model
5. Evaluated model performance
6. Tested model on new images

🧠 Model Used

- YOLOv8 Nano (yolov8n.pt)
- Lightweight and fast model suitable for real-time detection

---

🚀 Training Details

- Epochs: 1–5 (reduced for faster training)
- Image Size: 320
- Dataset Split: Train/Test

📊 Results

- Model successfully detected objects (person)
- Bounding boxes were generated on test images
- Predictions saved in: runs/detect/predict/

🖼️ Output Example

- Input Image → Processed by YOLO
- Output → Image with bounding box + label

🔍 Testing

The model was tested on new images uploaded in Colab, and it successfully detected objects using YOLOv8.

⚡ Optimization Techniques

- Reduced epochs for faster training
- Used lightweight dataset
- Used YOLOv8 nano model

🎯 Conclusion

YOLOv8 provides efficient and fast object detection. Even with limited training data and reduced epochs, the model demonstrates accurate detection capability.

🎤 Viva Points

- YOLO is a real-time object detection algorithm
- Performs detection and classification in a single step
- Faster than traditional CNN-based methods
- Uses bounding boxes for localization
